

ANALYTIX DATA SERVICES

LiteSpeed **Conversion**

Inside this Issue:

Software Driven ETL Conversion
Platform

LITESPEED CONVERSION

Benefits:

Reliable and automated process for ETL conversion

Streamline conversion between ETL vendors

Reuse and leverage industry job design best practices

Reduce development costs

Reduce the number of high priced high skilled resources to analyze legacy ETL tool jobs and manually create jobs for target ETL tool

Deliver instant business value

Increased efficiency and reduced risks across Integration projects

Gain better insight, control and visibility over the conversion scope and status of the effort using Mapping Manager

Improve data quality and governance

Deliver instant business value

Reduce time and resources

Accelerate data integration projects

Eliminating the costly barrier to ETL migration!

Software Driven ETL Conversion Platform

The Automated way to QUICKLY convert between ETL Platforms

The AnalytiX DS – LiteSpeed Conversion® (ALC) solution runs as Software as a Service (SaaS) and provides an automated framework that automates the conversion of ETL tool platforms. Enable FAST and AUTOMATED conversion between one ETL Platform and another. The ALC SaaS environments makes the entire conversion process completely automated and transparent with built in profiling measures, status reports, lineage and impact analysis features which are available in ALC and AnalytiX Mapping Manager (AMM).

The ETL XML files from various data integration (DI) ETL sources can be imported into ALC and converted into equivalent formats in the ALC repository which can then be viewed, modified and customized (if needed) and later exported out into any other data integration ETL Platform in the appropriate XML file format. All the legacy ETL tool transformations are automatically converted into "compatible" transformations of the new ETL tool platform.

AnalytiX LiteSpeed can quickly help re-platform ETL Jobs between any of the following ETL platforms:

Informatica 9.0 and greater

IBM Info Sphere Data Stage 7.5 and greater

Talend

Microsoft SQL Server SSIS 2008 and greater

Oracle Data Integrator (ODI)

SAP Data Services

Pentaho

etc.

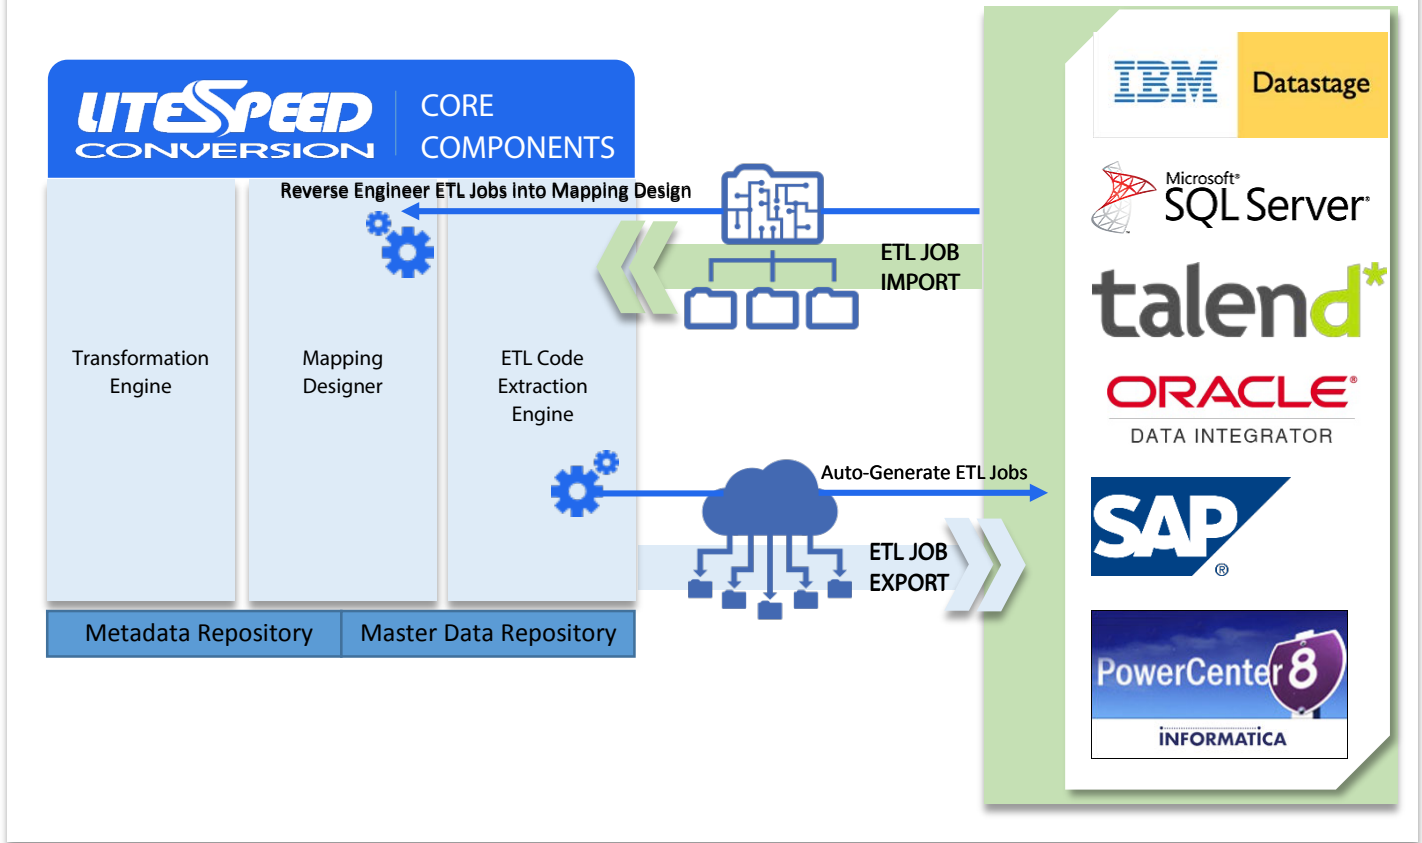

**SOFTWARE DRIVEN AUTOMATED
ETL CONVERSION!**

Ensures Consistency, Speed, Low
Costs and Low Risks.

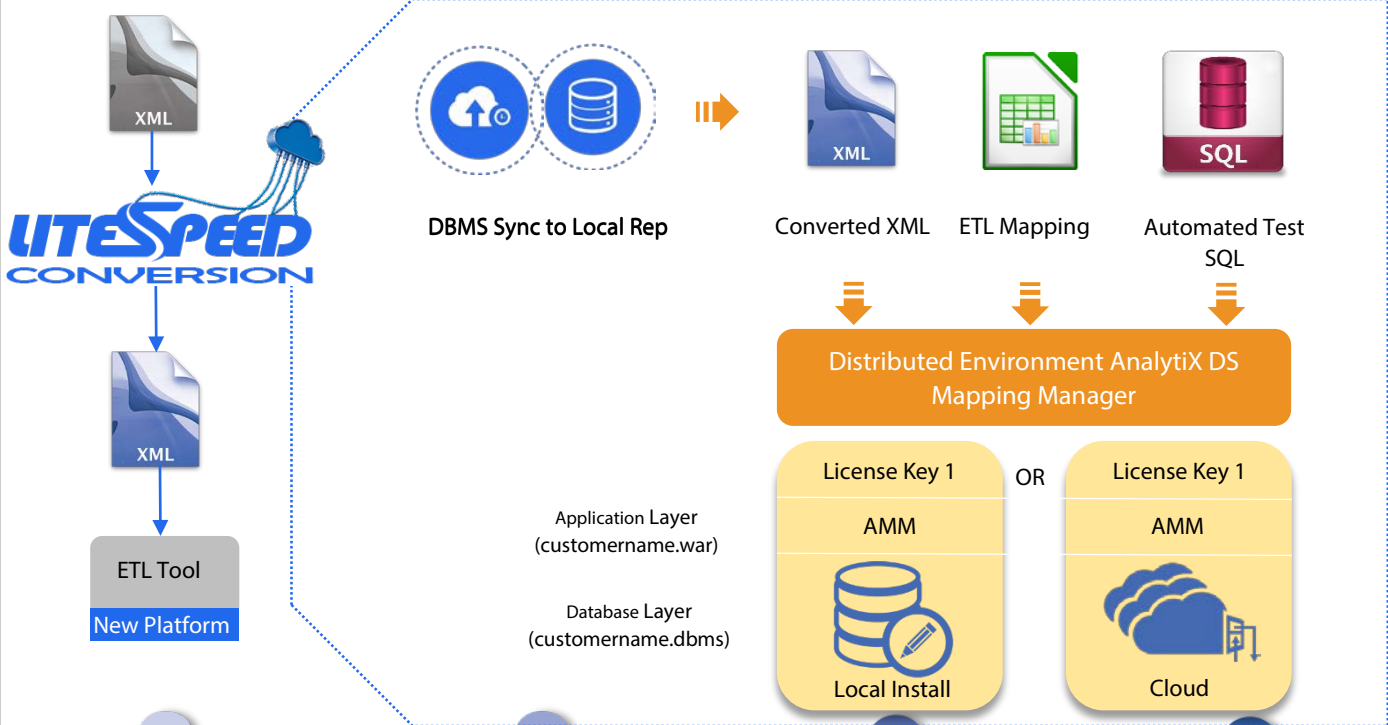

Mapping Manager ETL Tool Integration

Data Mapping & Governance Framework

LiteSpeed Conversion integrates with Mapping Manager to provide a robust Data Mapping & Governance framework by enabling high data quality and data management enterprise data mappings and governance through the lifecycle change process in organizations. Once mappings are converted they reside in Mapping Manager and can be governed, versioned, audited with enhanced Lineage and impact analysis views. The diagram below depicts the high level Data Mapping and Governance Framework across multiple heterogeneous Source and Target systems.

Automated Documentation of the Conversion Process and Metadata

KEY FEATURES

Build a legacy ETL tool template to automatically analyze ETL jobs and import into Mapping Manager as source-to-target mapping specs.

Define Job Design best practices and Auto Generate XML templates based on the XML Integration Library.

Version the mapping specification to preserve the original state of the converted job.

Built in features like;

- Job documentation
- Profiling measures
- Status reports
- Lineage impact and analysis

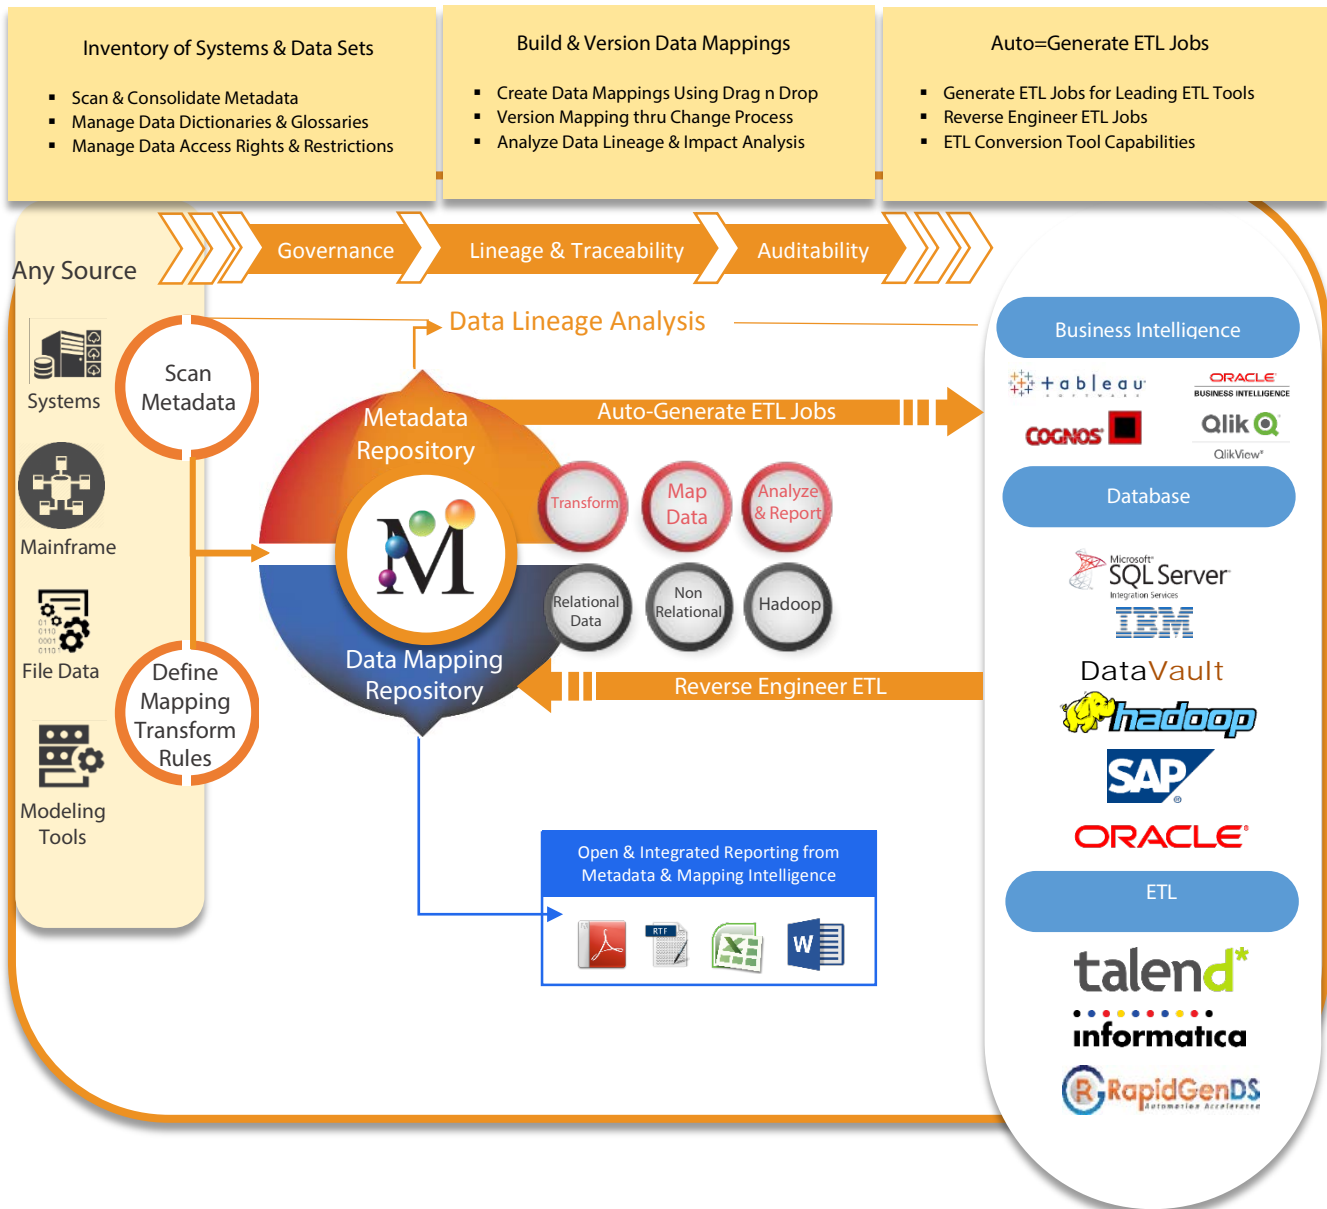

Export the imported mapping to the target ETL tool and auto-generate the Converted ETL job.

Reverse and forward engineered jobs are NOT delivered in spreadsheets.

Comes in a purpose-built mapping repository

Enables the use of custom templates in auto-generation of code going forward!

DATA GOVERNANCE FRAMEWORK

ALC provides robust Data Governance by enabling high data quality and data management of mission critical systems in an Organization. Below diagram depicts a high level view on Data Governance Framework across multiple Heterogeneous Source and Target systems.

A Few of Our Customers

Quick Facts About AnalytiX DS

Founded: 2006
Headquarters: Chantilly, VA
Employees: 200
Offices: USA, India (Hyderabad)
Leadership: >30 years in Data Integration
Market Leader: Enterprise Data Mapping

>1000 Customers

- Nearly 50% of Fortune 1000
- Global Customer Base
- Global Government Install Base

Partner/Resellers

- Relation with Top 5 System Integrators and Off-shore Integrators
- 20+ Resellers Globally
 - HP Global Reseller
